MECW v.43 Letter 10, ME 28 April 1868

$\nabla p' = \nabla C\{V\} \wedge \sim\Delta V \mid \nabla S'$?

"Let us assume the value of money falls by 1/10; then, other things remaining equal, the price of commodities rises by 1/10."

$\nabla C\{\text{money}\}\{\text{gold}\} \longrightarrow \Delta C\{V\} \mid \Delta C\{\text{money}\}\{\text{gold}\} \longrightarrow \nabla C\{V\}$

"Given a fall in the value of money, the price of labour, unless it rises in the same proportion, falls, the rate of surplus value rises" [...]

$(\nabla C\{\text{money}\}\{\text{gold}\} \longrightarrow \nabla V) \rightarrow \Delta S' \mid \Delta C\{\text{money}\}\{\text{capital}\} \wedge \nabla V$
